

Here our requirements for the blog-customizing, based on the already chosen, prepared and configured blog. Please provide a quotation, regarding the following described issues – not more not less :)

The three main points are

1. Menu, we would like to modify the Page-Menu to a Category-Menu. See screenshot (1)
 - The “HOME”-site is showing all posts.
 - The link “Category 1” might not show the page, but all posts which have been classified as Category 1; Category 2 as Category 2; etc.
 - The number of categories have to be flexible, adding new ones and deleting old ones without changing the code/style.
2. Show our login menu for WFW
 - The login menu is shown on all pages (Home, Categories) located at (2) on the screenshot below
 - The cloud desktop opens in new window, in case the authentication was successful.
 - The QQauth opens in a popup window, if successful the cloud desktop opens in new window.
 - The registration for opens in a popup/new window.
 - If possible, while scrolling down the login menu follows

3. Deleting the 3rd column (Sidebar 2, right side) from the style.
 - The 3rd column (C) is not required, the available space can be added to the column with the posts...
